June 2023

Keeping Ahead of the Pack

An independent laboratory has generated a report verifying the compliance of Alango's Super-Wide Band technology under ITU-T P.1120 for automotive hands-free communication.

The standards for premium automotive hands-free performance have shifted gears, and with the revved-up advancements in technology, the execution of clear calls has accelerated miles ahead since the ITU first rolled out its Narrow-Band recommendation back in 2008. Alango is leading the pack in the relentless race for enhanced voice call intelligibility.

Viva Tech Gets a Hearing

Dr. Alexander Goldin, founder and CEO of Alango Technologies will be speaking at Europe's biggest startup and tech event: Viva Technology. Dr. Goldin's presentation is entitled:

Helping People to Hear Better The Inspirational Challenge and the Solution

In 2022, Alango emerged victorious as one of the 10 winners (out of 536 entrants) in the OPPO Research Institute competition. The technology proposals submitted were purposefully designed to tackle society's most significant challenges. Alango-BeHear feels a great sense of honor being acknowledged by OPPO and is delighted to be sponsored by them for a speaking engagement at Viva Technology, where they will champion their vision of making accessible and affordable hearing solutions available to the masses.

Dr. Goldin will speak at 9:30AM, June 16 at the VIVA Tech Pitch Studio, Paris Expo Porte de Versailles
